Digitally transform your visitor sign in process

A smart way to welcome your visitors

There is currently a lot of buzz around the need for organisations to modernise their workplace and one area that is frequently being highlighted is the Visitor Management System. But why?

Alongside benefits such as reduced operational costs, increased efficiency and personally branded visitor experiences, digital sign in systems meet your GDPR compliance regulations which paper based log systems no longer achieve.

Digitalised Visitor solutions can control the data you chose to collect, ask consent, record and store data securely. Existing paper log systems leave visitor records visible to anyone that looks at them.

Personalise your visitor experience

Customisable design and sign in steps

Beverage selection

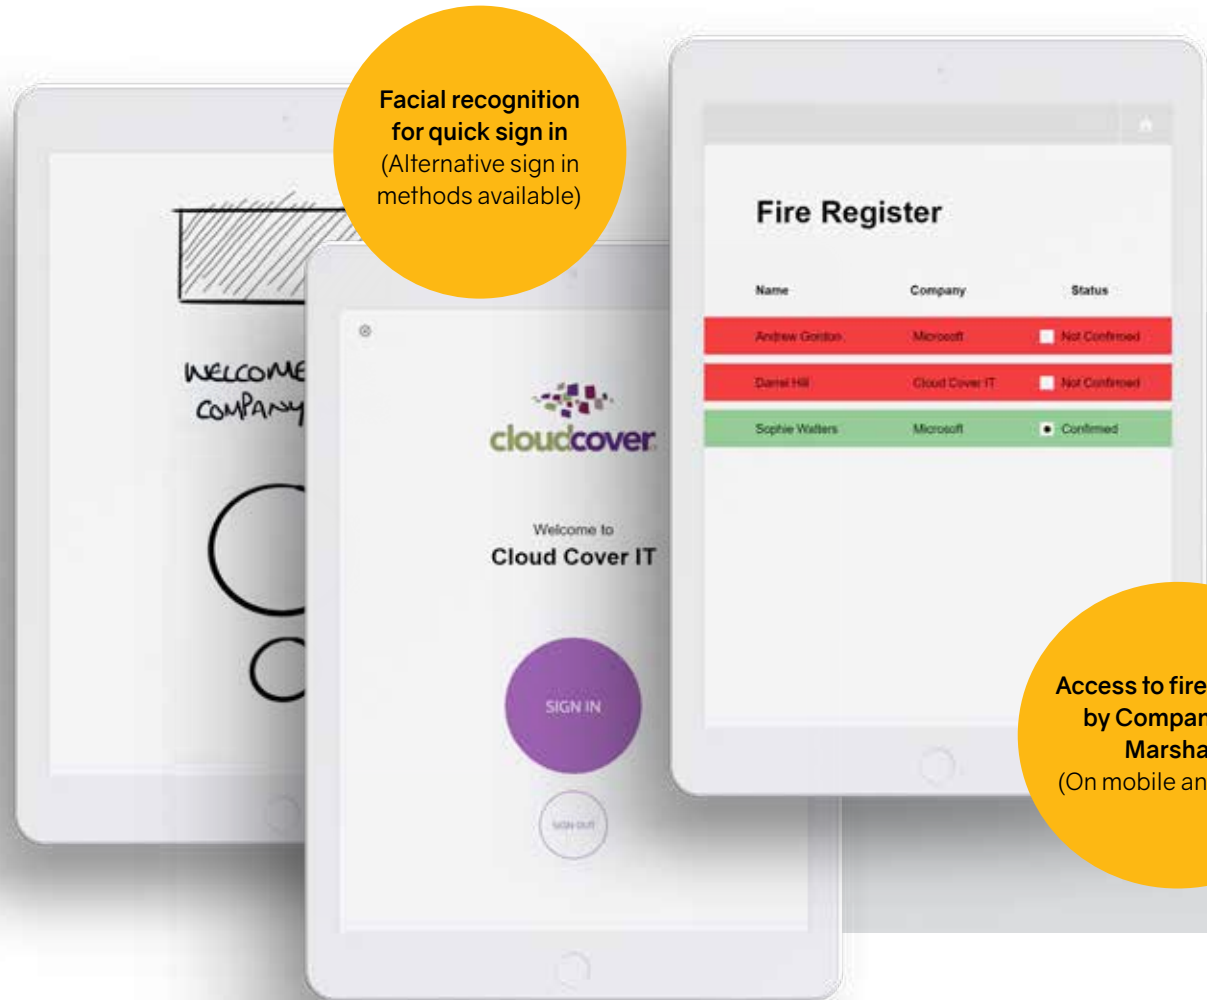

Customisable visitor data collection

GDPR complaint

Real-time analytics

Email notification of arrivals

Facial recognition for quick sign in
(Alternative sign in methods available)
